Implementing Line Based Credit Flow CFA (Public)

Updated: Jan 3, 2026

You have achieved the Goals!

Completed

Status

Goal Description

Transition Flipkart EMI (FKEMI) from a transaction-based onboarding model to a reusable credit line architecture. This initiative aims to eliminate checkout friction by allowing New-To-Bank (NTB) customers to onboard once and leverage a persistent credit limit for subsequent purchases, decoupling the credit offer from specific cart assets.

More Info

Expected Impact / Metric:

Conversion Rate (CVR) Uplift: Increase in transaction completion by removing repetitive onboarding steps and friction for repeat customers.

Reduction in Time-to-Transaction: Drastic decrease in the "checkout-to-success" time for existing users (shifting from minutes to seconds).

Repeat Transaction Frequency: Growth in the number of transactions per customer, as the credit line encourages multiple purchases over a single one-off loan.

Lower Acquisition Cost (CAC): Improved marketing efficiency by acquiring a customer once for a "Line" rather than spending to re-onboard them for every individual purchase.

Goal Start Date:

Nov 24, 2025

Goal Due Date:

Dec 24, 2025

Re Kyc Flow 1PEMI1 (Public)

Updated: Dec 30, 2025

You have achieved the Goals!

Completed

Status

Goal Description

Designed and implemented a new UI flow for Re-KYC by disabling the existing Upgrade KYC action and introducing a two-step screen. The flow displays fetched customer address details for verification and captures user consent. Implemented OTP-based validation on the registered mobile number to confirm identity. Suggests seamless completion of Re-KYC and extension of KYC validity while ensuring regulatory compliance. The solution improves user experience by reducing friction in the Re-KYC process.

More Info

Expected Impact / Metric:

- 1.Increased Re-KYC completion rate through a simple, guided two-step UI flow.
- 2.Reduced customer drop-offs by enabling address confirmation and OTP verification instead of mandatory Video KYC.
- 3.Improved user experience with clear consent, validation, and error handling at each step.
- 4.Ensured regulatory compliance for high-risk customers while allowing uninterrupted transactions.
- 5.Reduced support and operational overhead by minimizing failed or incomplete KYC journeys.

Goal Start Date:

Jul 14, 2025

Goal Due Date:

Sep 5, 2025

Improving Data Validation and User Flow in 2VW Basic Details Page (Public)

Updated: Dec 30, 2025

You have achieved the Goals!

Completed

Status

Goal Description

Implemented robust validations for PAN and Aadhaar fields using length and regex checks. Enhanced the Check Eligibility flow by enforcing mandatory field completion and user consent before enabling the action. Identified and resolved a production issue related to the Terms and Conditions checkbox by performing root cause analysis and applying a permanent fix at the root level, thereby improving application stability and user experience.

More Info

Expected Impact / Metric:

- 1.Reduced invalid eligibility API requests by preventing incorrect PAN/Aadhaar submissions at the UI level.
- 2.Lowered backend load by restricting premature eligibility checks.

- 3.Achieved zero recurrence of the checkbox-related production issue post-fix.
- 4.Enhanced page responsiveness and interaction reliability.

Goal Start Date:

Jul 21, 2025

Goal Due Date:

Aug 14, 2025

Onboarding into Fintech UI (Public)

Updated: Dec 30, 2025

You have achieved the Goals!

Completed

Status

Goal Description

Successfully onboarded to the fintech payment application and developed a strong understanding of the overall fintech UI architecture. Gained hands-on knowledge of key tenants including CFA, 2VW, and UPI, along with exposure to projects such as 1pEMI and CBC. Acquired a clear understanding of the New Relic dashboard, including data flow and monitoring insights. Additionally, learned the deployment pipeline workflows and the end-to-end UI server end to end flow.

More Info

Expected Impact / Metric:

- 1.Demonstrate self-sufficiency by minimizing reliance on team members for day-to-day development and issue resolution.
- 2.Take end-to-end ownership of assigned products (1pEMI, 2VW), including development, monitoring, and deployments.
- 3.Achieve deeper proficiency in the fintech UI ecosystem and internal tools, enabling faster onboarding to new features and reduced turnaround time.

Goal Start Date:

Jun 18, 2025

Goal Due Date:

Jul 4, 2025
